A SIMPLE RULE FOR ACCURATELY COMPUTING INTEREST AT ANY GIVEN PER CENT. FOR ANY LENGTH OF TIME.

Multiply the principal (amount of money at interest) by the time reduced to days; then divide this product by the quotient obtained by dividing 360 by the number of days in the interest year) by the per cent. of interest, and the quotient thus obtained will be the required interest.

Solution.

\$162.50

The following table shows the legal number of pounds per bushel of the following articles in the States therein named :

TO MEASURE CORN IN THE CRIB.
This rule will apply to a crib of any size or kind. Two cubic feet of good, sound, dry corn in the ear will make a bushel of shelled corn. To find, then, the quantity of shelled corn in a crib of corn in the ear, measure the length, breadth and height of the crib, inside of the rails; multiply the length by the breadth, and the product by the height of the crib, and you have the number of bushels of shelled corn in the crib. To find the number of bushels of corn in the ear, multiply the length, breadth and height of the crib, inside of the rails, by 8, and point off one figure in the product for decimials, and this product will give you the number of bushels of corn in the crib.

1878-1885
